

Purple Martin Houses

Purple Martin Houses are built from aluminum, which helps keep the martins cool during the hot summer months. Such construction also offers durability to your martin house and will last many seasons. Each of the compartments is the perfect size for martins and has a 2.125" diameter entrance hole. Each compartment also has an individual lift up/snap-out door, so you can clean one out without disturbing the other nests. Guard rails along the porches of the home prevent babies from falling out of the nest and allow martins room to perch and preen. This is also accomplished with an included roof perch. A set of winter door stops close the home when your martins migrate south. These houses are compatible with any pole with a 1.25" outside diameter. One 18 room house and one 12 room house.

These have been stored inside of a garage for the last several years.

The 12-room house sells new for \$221.99 and the 18-room house sells new for \$239.99.

Early April is the ideal time to put them up and attract your own Purple Martins!
